

Site visit for Shell students

08 November 2016

First year NESCol Shell Engineering Scheme students recently attended the Shell St Fergus Gas Plant where the cohort were presented with their Personal Protection Equipment as part of their induction programme.

Steve Morris, Plant Manager for Shell at St Fergus said, “Each year, we’re impressed by the calibre of the students we meet during their time at Shell. It’s a pleasure and an honour to help create a new understanding of the energy industry. This induction covers what it means to be a Shell representative – our expectations and ways of working. Over the course of the programme the students will participate in community and college activities, attend industry visits and exhibitions and it is important that everyone represents our values and behaviours.”

Student Andrew Howden commented, “As a trainee I would like to thank Shell for this opportunity to visit and tour the St Fergus gas terminal complex. It was interesting and really informative as all the various operations were explained to the group.

“The staff were very willing to answer any questions and explain the technology involved. The cleanliness and safety procedures involved at the plant were first class.”

The sponsored Shell Engineering Scheme is offered by NESCol at Fraserburgh Campus and it is an intensive two year fastrack course designed to meet the evolving needs of the energy industry. The programme consists of studying four qualifications – Performing Engineering Operations Level 2; National Certificate in Engineering Systems; Higher National Certificate (HNC) in Measurement and Control and an HNC in Electrical Engineering – five days a week.

The students also provided support at Aden-eeen, The Shell Fireworks Parade 2016 earlier this month.

Steve Morrice, John Raine and Duncan Birnie from Shell escorted the group around the site which will be home to four work placements in total for each student.
